

PYTHON GUI PROGRAMS USING TKINTER

1. Student Details

Question

Write a Python GUI program using Tkinter to get the student Name, Age, and Course and display the entered details when the Submit button is clicked.

Program

```
import tkinter as tk

def show_details():
    result.config(
        text=f"Name: {name.get()}\nAge: {age.get()}\nCourse: {course.get()}"
    )

window = tk.Tk()
window.title("Student Details")
window.geometry("350x300")

tk.Label(window, text="Student Details",
        font=("Arial", 16)).pack(pady=10)

tk.Label(window, text="Name").pack()
name = tk.Entry(window)
name.pack()

tk.Label(window, text="Age").pack()
age = tk.Entry(window)
age.pack()

tk.Label(window, text="Course").pack()
course = tk.Entry(window)
course.pack()

tk.Button(window, text="Submit",
        command=show_details).pack(pady=15)

result = tk.Label(window, text="")
result.pack()

window.mainloop()
```

Output

Student Details

Name: Arun
Age: 20
Course: BCA

2. Product Details

Question

Write a Python GUI program using Tkinter to get the Product Name, Price, and Quantity and display the entered details when the Submit button is clicked.

Program

```
import tkinter as tk

def show_product():
    result.config(
        text=f"Product: {product.get()}\n"
            f"Price: ■{price.get()}\n"
            f"Quantity: {quantity.get()}"
    )

window = tk.Tk()
window.title("Product Details")
window.geometry("350x300")

tk.Label(window, text="Product Details",
        font=("Arial", 16)).pack(pady=10)

tk.Label(window, text="Product Name").pack()
product = tk.Entry(window)
product.pack()

tk.Label(window, text="Price").pack()
price = tk.Entry(window)
price.pack()

tk.Label(window, text="Quantity").pack()
quantity = tk.Entry(window)
quantity.pack()

tk.Button(window, text="Submit",
        command=show_product).pack(pady=15)

result = tk.Label(window, text="")
result.pack()

window.mainloop()
```

Output

```
Product Details

Product: Laptop
Price: ■50000
Quantity: 2
```

3. Place Details

Question

Write a Python GUI program using Tkinter to get the Place Name, City, and State and display the entered details when the Submit button is clicked.

Program

```
import tkinter as tk

def show_place():
    result.config(
        text=f"Place: {place.get()}\n"
            f"City: {city.get()}\n"
            f"State: {state.get()}"
    )

window = tk.Tk()
window.title("Place Details")
window.geometry("350x300")

tk.Label(window, text="Place Details",
        font=("Arial", 16)).pack(pady=10)

tk.Label(window, text="Place Name").pack()
place = tk.Entry(window)
place.pack()

tk.Label(window, text="City").pack()
city = tk.Entry(window)
city.pack()

tk.Label(window, text="State").pack()
state = tk.Entry(window)
state.pack()

tk.Button(window, text="Submit",
        command=show_place).pack(pady=15)

result = tk.Label(window, text="")
result.pack()

window.mainloop()
```

Output

```
Place Details

Place: Marina Beach
City: Chennai
State: Tamil Nadu
```

4. Employee Details

Question

Write a Python GUI program using Tkinter to get the Employee Name, Employee ID, and Department and display the entered details when the Submit button is clicked.

Program

```
import tkinter as tk

def show_employee():
    result.config(
        text=f"Name: {name.get()}\n"
            f"ID: {emp_id.get()}\n"
            f"Department: {dept.get()}"
    )

window = tk.Tk()
window.title("Employee Details")
window.geometry("350x300")

tk.Label(window, text="Employee Details",
        font=("Arial", 16)).pack(pady=10)

tk.Label(window, text="Name").pack()
name = tk.Entry(window)
name.pack()

tk.Label(window, text="Employee ID").pack()
emp_id = tk.Entry(window)
emp_id.pack()

tk.Label(window, text="Department").pack()
dept = tk.Entry(window)
dept.pack()

tk.Button(window, text="Submit",
        command=show_employee).pack(pady=15)

result = tk.Label(window, text="")
result.pack()

window.mainloop()
```

Output

```
Employee Details

Name: Ravi
ID: E101
Department: IT
```
